Email: valguscreative@gmail.com

Lead Engineer: Wayne Ramsey

Target Audience: *Clinic Directors, Practice Managers, & Lead Dentists / Specialists*

1. Critical Technical Failures in Private Medical & Dental Websites

- **Zero Mobile Patient Intake:** Prospective patients seeking consultations after hours are forced to call landlines during busy clinical shifts or walk in to fill paper forms, causing lost consultation leads.
- **Missing Local Medical Schema (MedicalBusiness):** High-value local searches (e.g., "*dentist in Parklands*", "*pediatrician Westlands*") rank below third-party directory sites due to missing structured JSON-LD data (*SEO friendly code*).
- **Slow Mobile Load Times:** Heavy, un-cached facility images result in long load latencies on local 3G/4G cellular networks, driving urgent-care patients directly to competing clinics.
- **Friction in Service & Insurance Visibility:** Patients struggle to quickly verify accepted insurance providers, consultation fees, or specific doctor clinic days on smartphone screens.

2. Operational Impact & Engineering Solutions

Operational Leak	Business Impact	Engineering Solution
Missed After-Hours Leads	Patients researching specialist appointments in the evening bounce off if forced to call during closed office hours.	Self-service online appointment request form with direct reception email/WhatsApp notifications.
Directory Traffic Hijacking	Patient search traffic lands on third-party aggregators instead of your direct portal, reducing brand authority.	Embedded MedicalBusiness JSON-LD schema, dynamic Google Maps routing (<i>google business profile</i>), and localized meta tags.
High Mobile Bounce Rate	Urgent-care patients leave slow-loading sites before finding clinic location or contact numbers.	High-speed Single-Page Application (SPA) using tested languages delivering sub-second mobile loads.
Reception Overhead	Staff spend hours answering repetitive phone queries regarding open hours, location, and doctor schedules.	Clear specialist clinic matrices, accepted insurance galleries, and click-to-call / click-to-map controls.

3. Agreement Fact Sheet: What to Expect vs. What NOT to Expect

What to Expect

- **Sub-Second Mobile Performance:** A web application engineered to load instantly on mobile networks across Kenya without heavy page refreshes.
- **Direct Reception Routing:** Instant notifications delivered to reception via email or WhatsApp whenever a patient submits an appointment request.
- **Local SEO Infrastructure:** Complete technical SEO setup including dynamic sitemap.xml, Open Graph tags, and MedicalBusiness structured schema.
- **Production Security Standards:** HTTPS deployment on a Linux VPS with strict environment security, SSL protection, and structured logging.
- **Staff Admin Control:** Simple admin dashboard allowing clinic staff to update operating hours, add new doctors, or alter service listings without touching code.

What **NOT** to Expect

- **Guaranteed #1 Google Rank Overnight:** We deliver full technical search infrastructure, but organic search rankings take time and rely on clinic review volume and domain age.
- **Full Electronic Health Record (EHR) System:** This platform handles patient acquisition, appointment intake, and practice details. It does not replace internal hospital management or patient medical charting systems.
- **Medical Copywriting & Legal Clearance:** Clinical service descriptions, doctor credentials, consultation fees, and medical disclaimers must be provided and approved by your medical team.
- **Real-Time Insurance Cover & Claim Processing:** The site captures patient insurance details on booking forms, but does not directly connect to insurance provider portals (e.g., SHA, Jubilee, AAR) to run automated cover pre-authorizations or claim clearances.
- **Third-Party Domain & VPS Hosting Fees:** Development includes server setup and deployment, but the clinic pays third-party providers directly for annual domain registration (.co.ke / .com) and monthly VPS server hosting
- **Social Media Management & Blog Writing:** Managing clinic social accounts (Instagram, Facebook, TikTok), writing weekly medical blog posts, or managing online public relations is not included.

4. Scope & Pricing Options

Package Tier	Scope & Deliverables	Investment (KES)
Tier 1: Core Practice Portal	Custom mobile-first design, core service pages, doctor profiles, click-to-call/map, MedicalBusiness schema, appointment intake form, and Linux VPS deployment.	KES 45,000 – KES 50,000
Tier 2: Advanced Specialist Platform	Everything in Tier 1 + dynamic doctor schedule matrices, filterable treatment directory, accepted insurance partner showcase, and staff admin management dashboard.	KES 55,000 - KES 65,000
Ongoing Maintenance & Security	Server security patches, database backups, uptime monitoring, and minor content updates.	KES 3,500 / month

5. Next Steps & Proposal Acceptance
